(Illustrated.)

The extract from Ch'ien-lung's essays is as follows:

The names of the "Five Mountains" appear in the classic poetry "Shi-Kyo," and the real sketches of them have been found in the Household Book of the Emperor Bu of the Han Dynasty, although what is mentioned about them therein is mostly without foundation, and literary men do not attach any importance to these stories.

However, such an indication only tells us how the mountains changed in appearance, turning and growing as do writings. The names are given according to the forms, but the drawn sketches do not correspond with these descriptions. In the old Geography of the Imperial Household there are several real drawings of the five mountains.

One of them was made by Du Whang, a man of the Ming Dynasty, and his work contains names of the spirits of the mountains, and their titles, powers and duties, while we fail to find any of these traditions in the official records. No doubt the men of later periods exaggerated what were mentioned in the Household books.

254

254

All things green and yellow were not like human beings, and exist subject to the natural law. What, then, can be said about the real appearance of the mountains?

In order to prove the identity of the old writings corresponding to the forms, Dong Bang Dah was appointed for the observation. As a result, it was found that the present forms agree with the old descriptions in "Ko Sheng," the book published in the Chou Dynasty, B.C.

The idea of the sketching of the mountains can be proved by "Roku-Kyo" (six classical books). It might have nobly explained itself as do the things in Yao's religion.

If we accept what Pop-Po-tze [a Chou sage] says, "Entering amidst the mountains can defend us from any dangers or evils," we will be liars.

If the five mountains were originated as were the Kuin-Ling, there must show an appearance of the root.

According to the Geography these run through the Western Extreme. Why should we limit ourselves to worship those within our boundary?

Once upon a time Hoa-Ting (a tribe of the Han period) presented us with some jades, and also great instruments for measuring high mountains, and they took the records of the five mountains in order to enrich the prosperity of our territorial resources.

Some old descriptions were not true, I mean the things mentioned in the old "Grand Geography," as, comparing again, they do not agree with each other, and I hereby correct the misinformation and express my idea on the subject.
